BEEZEE

Website redesign checklist

For everyone who's always beezee.

this list is for you

Redesigns don't fail because of design. They fail because of the things nobody thought about: passwords, old URLs, legal pages, images. Go through this list before anything starts. Every box you tick now saves you hours later.

How to use it: print it or open it on your phone, tick what's done and underline what's missing. With this list you arrive at the first conversation with your developer prepared.

1 Why I'm redesigning

- [ ] I know what the new site has to achieve (more enquiries, sales, presentation, trust).
- [ ] I know what doesn't work on the old site and what works well – I'm not throwing that away.
- [ ] I have 3 sites I like and I know why (not just "it's pretty").
- [ ] I know who the visitor is and what they should do in the first 10 seconds.
- [ ] I have a rough budget and a deadline.

2 Content

- [ ] Texts for all pages are written or I know who will write them.
- [ ] I have images and the logo in good quality (not pulled from Facebook).
- [ ] I know which languages the site needs.
- [ ] The list of products or services with prices is up to date.
- [ ] Contact details, opening hours and location are checked.
- [ ] I have customer reviews or references I'm allowed to publish.

3 Access and tech

- [ ] I know where the domain is registered and when it expires.
- [ ] I have access to hosting (cPanel/FTP) and to the domain control panel.
- [ ] I have admin access to the existing site (WordPress, shop).
- [ ] I know where business email lives and that the redesign won't interrupt it.
- [ ] I have access to Google Analytics, Search Console and ad accounts.
- [ ] I know which external services are connected (payments, shipping, newsletter, ERP).
- [ ] A backup of the old site and database exists.

4 Google and old URLs

- [ ] I have a list of pages that bring traffic (Search Console or Analytics).
- [ ] Every old URL that changes will be redirected (301) to the new one.
- [ ] Page titles and descriptions (meta) are written for the new pages.
- [ ] The Google Business profile is current and will point to the new site.
- [ ] After launch the site will be submitted to Search Console with a new sitemap.
- [ ] The test version of the site is hidden from search engines until launch.

5 Legal and privacy

- [ ] The imprint contains all legally required company details.
- [ ] The privacy policy describes what the site actually collects (forms, newsletter, analytics).
- [ ] Cookies: I know whether the site needs a banner at all, and if it does, that it's correct.
- [ ] Forms have consent and I know where the data goes.
- [ ] For a shop: terms and conditions, shipping, returns, prices with VAT.

6 Before and after launch

- [ ] I've reviewed the site on a phone, not just on a computer.
- [ ] All forms are tested: the message really arrives.
- [ ] Links and buttons work, no "lorem ipsum" or placeholders left.
- [ ] Speed is checked (PageSpeed Insights in the green).
- [ ] I know who handles updates, backups and security after launch.
- [ ] It's agreed how and who edits content after launch.
- [ ] The old site stays archived for at least a month.

Shall we buzz?

If you run out of time or patience on any of these points, write to me. I'll look at your site, tell you what makes sense and listen to what you need.
